

**Title: Sample Payload for Supplier SOAP Web Service**

**Summary: Sample payload to create supplier and its child entities using Supplier SOAP Web Service**

**Content:**

Supplier SOAP Web Service is an inbound web service that lets you create and update suppliers from external repositories into Oracle Procurement Cloud.

Attached is a sample payload that can be used to create a supplier and some of its child entities (viz. business classifications, products and services, addresses, sites, site assignments, contacts and contact addresses) using the service.

```

- <typ:createSupplier>
-
